

What you Don't Know Could HURT You!

Let **Bio-Scan™** HELP....

Aspergillus sp

Penicillium sp

Fusarium sp

Pithomyces sp

Dust Mite

After years of research the environmental scientists at the Environmental Diagnostic Laboratory (EDLab™) have designed **Bio-Scan™** to provide the most quantitative and qualitative analysis for identifying mold and other ubiquitous allergens. The methodology is simple, affective and easy to use. Each sample is given an identification number to track the analysis process.

Bio-Scan™ is proprietary tape pull product with a 2cm² grid digitally imprinted on the sample, meaning this is the only area that needs to come in contact with the contaminated surface. After the **Bio-Scan™** sample is pulled from the surface, it is then applied to glass slide, placed in the mailer provided along with "Chain of Custody" form then sent to the EDLab to be analyzed.

The particulates analyzed via **Bio-Scan™** include but are not limited to: pollen, mold, fibers (e.g. manmade fibers, fiberglass, and plant fibers), dust mite, insect biodebris, and skin cells. The environmental scientist at EDLab™ perform light microscopy on the sample provided. The data is then entered in the CAAMP™ interrelational proprietary database at EDLab™ providing a mathematical formula for an accurate count and identification of each type of particulate found on the 2cm² area. The information is compiled in tabular form and presented in a report with a list of all the particulates, the amount of each particulate and a glossary defining the identified constituents.

The parent company, Pure Air Control Services is pioneer in the indoor environmental industry with trusted professional experience in the following: industrial hygiene, microbiology, public health, Ph.D. microbiology, mechanical engineering and medical scientists: occupational medicine, allergy/immunology, building/home diagnostics experience covers over 350 million square feet of in over 9000 buildings/homes, over 45,000 environmental laboratory samples identified and over 85 legal IAQ related cases.
